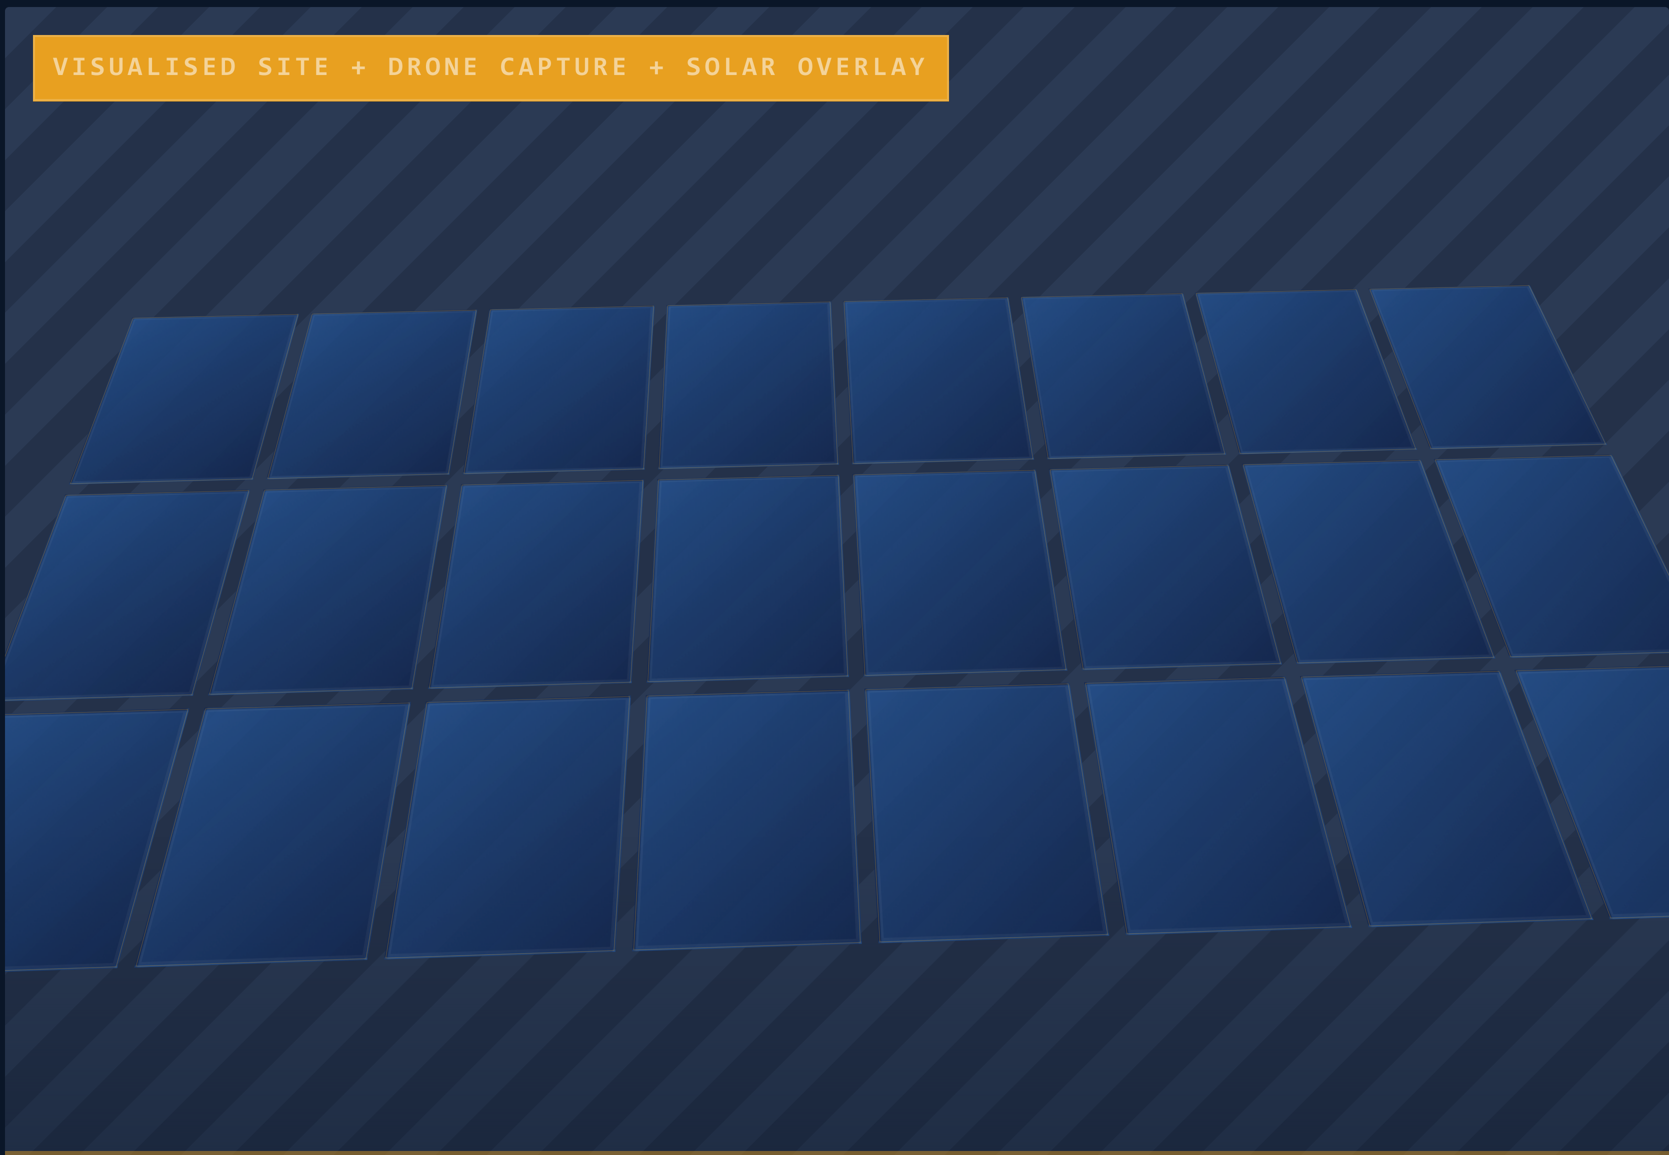
PREPARED
6 May 2026

NOV-47291

Full investment returned in under 6 years.

Then 19 years of pure financial return to follow.

INDICATIVE PROPOSAL · ROOF REFURBISHMENT + INTEGRATED SOLAR



PREPARED FOR

Eurotech Park

Unit 11, Eurotech Park, Burrington Way, Plymouth, PL5 3LZ

WAREHOUSING & DISTRIBUTION

500 m²

The opening case

The solar element of this project pays for itself in 5 years 8 months. The combined roof and solar package recovers in 12 years 5 months, sitting well inside a 25-year operational lifespan.

To the Property and Estates Team,

Following our desktop assessment of your site at **Unit 11, Eurotech Park, Burrington Way, Plymouth**, we have prepared this indicative proposal outlining the case for combining a commercial roof refurbishment with an integrated solar installation.

Based on an assessed roof area of approximately **500 m²** and the typical energy consumption profile for the **Warehousing & Distribution** sector, the figures that follow present a strong commercial case. This is not just about cost. It is a logical investment generating a healthy, guaranteed return.

This document has been prepared specifically for your site at Burrington Way. We are also offering a **free site visit and drone survey** to refine the figures and produce a fixed-price specification.

HEADLINE FIGURE

£417k

Projected 25-year electricity saving at a 7% energy inflation assumption — the financial spine of the proposal.

SOLAR PAYBACK

5y 8m

From commissioning. Roof and solar combined recover within 12y 5m.

Summary figures

YEAR 1 SAVING

£6,600

Estimated electricity saving in the first year of operation

25 YEAR SAVING

£417k

Cumulative saving across the operational lifespan

ROOF AREA

500 m²

Total assessed

SOLAR SYSTEM

49 kWp

325 m² usable

ANNUAL GENERATION

43,875 kWh

Estimated solar output

NET SOLAR RETURN

£373,569

After cost recovered

Indicative cost breakdown

ITEM	BASIS	COST
Commercial roof refurbishment Full system including labour, materials and access	500 m² at £160/m² New roof system fully installed	£80,000
Roofing subtotal		**£80,000**
Commercial solar installation Panels, inverter, mounting and grid connection	49 kWp at £900/kWp Fully installed and commissioned	£43,875
Solar subtotal		**£43,875**
Combined total investment (ex. VAT)		**£123,875**

When the investment pays back

SOLAR COST RECOVERED

5 yrs **8** mo

From commissioning date

Based on £0.24/kWh and a conservative 7% annual energy price increase.

ROOF + SOLAR COMBINED

12 yrs **5** mo

Full project recovered

Roofing investment treated as part of the operating asset, not amortised separately.

Both figures sit well within the **25-year operational lifespan** of the installation. Every year beyond that point is clear financial return with no capital outstanding.

A roof that earns its keep

The roof refurbishment at this site is not a maintenance cost in isolation. It is the structural platform that makes the solar installation viable.

Considered together, the entire project pays for itself well within the 25-year operational lifespan. From that point forward, every year of energy generation represents **pure financial return** with no outstanding capital to recover. **A roof that cost money becomes an asset that earns it.**

Your lease obligations

FULL REPAIRING LEASES · UNDERSTANDING YOUR LEGAL POSITION

If your occupation of this site is governed by a full repairing lease, the obligation to maintain the building envelope — including the roof — sits with you. The question is not whether you pay for the roof. It is whether you pay *on your terms* or on the landlord's.

01 · THE COST OF DELAY

A dilapidations claim is assessed at full replacement cost.

You pay for a new roof regardless — but at a time and price not of your choosing, plus surveyors' fees.

02 · THE OPPORTUNITY

Address it now and you control the outcome.

Combining roof works with solar **transforms a liability into a revenue-generating asset** for the remainder of your occupation.

A NOTE ON LANDLORD ENGAGEMENT

A new roof extends the asset life of the property. Solar adds a low-carbon credential supporting **ESG reporting and future letting value**. Nova can assist in framing the commercial case to a landlord where this is relevant to your situation.

The cost of inaction

A DETERIORATING ROOF IS NOT A PASSIVE RISK

REFERENCE IMAGERY · INDUSTRIAL ROOF, UK MIDLANDS

> **Your statutory obligations under health and safety law do not pause while a decision is deferred.**

Commercial and industrial roof systems degrade in ways not always visible from inside the building. As the occupier of this site, you carry a duty of care under the **Health and Safety at Work Act 1974** and the **Workplace Regulations 1992**. A roof in poor condition is a foreseeable hazard — and foreseeability is the test that matters in both HSE enforcement and civil litigation.

01

Water ingress

Creates slip hazards, electrical risks, and stock or equipment damage. Each incident is a documented liability event.

02

Fragile roof panels

Older sheets become fragile with age. Maintenance access creates a fall-through risk with serious criminal exposure under the Work at Height Regulations 2005.

03

Structural fatigue

Deformation of purlins or sheeting rails is rarely visible without inspection. Continued loading on a fatigued structure risks progressive failure.

RESOLUTION

One project

A full roof refurbishment eliminates every one of these risks in a single project. Combined with solar, it begins generating a financial return from day one of commissioning. The cost of acting is fixed and known. **The cost of not acting is open-ended.**

All figures are indicative and based on desktop assessment, MCS irradiance data and sector average energy consumption profiles. They demonstrate commercial viability only and do not constitute a guarantee of performance or a fixed price. Actual costs and savings will be confirmed following a full site survey, structural assessment and DNO application. Nova will issue a detailed fixed-price specification following site visit.

» NEXT STEP

Request your free site visit and drone survey.

No obligation. We assess your roof, refine these figures and produce a full, fixed-price specification.
